Module - CyberWarp

Event - Nibble Code

Introducing you to the realm of competitive coding, we present Nibble Code! Exclusively for freshmen, the contest will be much of a fun game which will have you scratch your heads over simple but tricky problem statements.

Platform: Codeforces

Problems : 6

Time : 3 hours

Rules :

1. You need to have a codeforces account, if you don't have one then create one.
2. This is an individual contest, you must solve every problem on your own without giving or taking help from anyone else.
3. During the contest the contestants are allowed to use any books and personal notes as well as a code written beforehand by you personally.
4. You may use third-party pre-written codes available on the internet on websites like geeksforgeesk, hackerearth, cp algorithms, etc. if the code was written and published/distributed before the start of the contest and any usage of the code should not violate the right holder's license or copyright.
5. If your code is found similar to any other participant then plagiarism will be checked and if found that you have copy-pasted the code with just some minor changes then you will not be considered for the leaderboard. If your code is similar due to the usage of some third party code then it will not be considered plagiarism.

6. You can submit any number of solutions for a problem. But your first solution to pass all the tests of the problem will be considered and its time will be reflected on the leaderboard.
7. Based on how long you take to solve a problem or how many wrong submissions you make, you will get some penalty. If two people solve the same number of problems then the one with the lower penalty will get a better ranking.
